

Quick and reliable communication is a key component in the success of any long term care facility. Facilities need the ability to communicate messages to residents and their families about upcoming appointments, medication reminders and updates on their relative's condition. On-premise component makes it cost-effective to use for routine messaging every day.

Effectively Communicate to Residents

Managing the unique schedules of all of your residents is a difficult communication challenge. Each resident has different medications, medication schedules and appointment schedules. BlazeCast can send prerecorded reminders to residents based on your existing records, simplifying the labor-intensive task of ensuring residents take their medications. BlazeCast integrates into the daily operation of a long term care facility, increasing communication and ROI.

BlazeCast has full-featured reporting capabilities that enable tracking of exactly when and where a specific message was received. It also highlights those residents who did not answer their phones, enabling staff to focus their time on residents who need it most.

Key Benefits

Communicate Effectively

- » Automatic medication and appointment reminders
- » Easy communication to resident's families in emergencies
- » Preconfigured broadcasts for daily usage
- » Full-featured reporting for audit purposes

Minimize Disturbances

- » Flexible zones for targeted broadcasts to specific areas

On Premise

- » Leverage your existing network to reach your residents faster and more reliably

Emergency Preparedness

BlazeCast lowers emergency response times and helps reduce miscommunication. BlazeCast can save pre-configured broadcasts for known scenarios, making it easy and fast to disseminate information in critical and stressful situations. BlazeCast makes it easy to configure broadcasts on the fly, so facility administrators can quickly respond to unexpected events.

BlazeCast provides a complete emergency notification solution for long-term care facilities. BlazeCast provides an ideal platform for critical notifications, like instructions during an evacuation. As a multimodal platform, residents can be reached in their rooms through overhead or set paging, with specific instructions based on their location within the building. With paging, the message is automatically broadcast at full volume and there is no action the resident needs to take to hear the emergency message.

External Communication

Long term care facilities have many stakeholders outside of their walls. Communication is necessary with residents' families to keep them informed and involved in their relative's lives. BlazeCast's outbound calling capabilities make it easy to reach the families of your residents in the event of an emergency or other critical incident. Using a pre-configured broadcast, administrators can easily notify the relatives of all their residents that they are safe and secure, and provide further information as necessary.
